

KUMAR WAGHMARE

DevOps Engineer with 3 years of experience in designing, deploying, and managing scalable cloud infrastructure across AWS and GCP environments for production-grade applications. Skilled in Kubernetes, CI/CD automation, and Infrastructure as Code (IaC) with expertise in building secure, scalable, and high-performing cloud-native systems. Focused on driving automation, deployment efficiency, cloud optimization, and reliable DevOps practices to support business growth and operational excellence.

Portfolio

Education

2021: B.E., G H Raisoni Institute of Engineering and Technology, Nagpur, Maharashtra, secured CGPA: 8.6/10

Core Competencies

- Cloud Infrastructure & Operations Management
- Infrastructure Automation & Provisioning
- CI/CD Pipeline & Deployment Management
- Environment Setup & Configuration Management
- Kubernetes & Container Orchestration
- Application Deployment & Platform Support
- Production Support & System Reliability
- Monitoring, Logging & System Visibility
- Incident Handling & Root Cause Analysis
- Backup, Recovery & Disaster Management
- Security Compliance & Access Control
- Cost Optimization & Resource Management
- System Scalability & Performance Improvement
- Process Automation & Workflow Efficiency
- Agile Delivery & Cross-team Collaboration

Technical skills

- Cloud Platforms:** AWS (EC2, ECS, EKS, Lambda, RDS, S3, CloudFront, VPC, IAM, Route 53, ACM, Systems Manager), GCP (Compute Engine, Cloud Run, GKE, Cloud Storage, Cloud SQL)
- Containerization & Orchestration:** Kubernetes (EKS/GKE), Docker, Helm, NGINX Ingress Controller, HPA, Microservices, Service Mesh
- CI/CD, Automation & IaC:** Jenkins, GitLab CI/CD, GitHub Actions, Webhook Integration, Docker Multi-stage Builds, Terraform (Modules, Workspaces, State Management), AWS CloudFormation, Ansible, Python, Shell Scripting
- Monitoring & Observability:** Prometheus, Grafana, AWS CloudWatch, ELK Stack, Fluent Bit, Alert Management, Performance Monitoring
- Security & Compliance:** IAM, RBAC, MFA, AWS GuardDuty, Inspector, CloudTrail, Vulnerability Scanning, SSL/TLS Certificate Management
- Version Control & Methodologies:** Git, GitHub, GitLab, Agile, DevOps Practices, Incident Management, RCA

Profile Summary

- Skilled in designing, deploying, and managing scalable **cloud-native infrastructure** using **Kubernetes, Docker, and microservices architecture** across EKS/GKE environments.
- Proficient in building and optimizing **CI/CD pipelines & Infrastructure as Code (IaC)** solutions using **Jenkins, GitHub Actions, GitLab CI/CD, Terraform, Ansible & CloudFormation**.
- Strong expertise in **cloud monitoring, logging, observability, and performance optimization** using **Prometheus, Grafana, CloudWatch, and ELK Stack**.
- Adept at implementing **cloud security, compliance, and access control** practices while driving **automation, cost optimization, and operational efficiency**.
- Well-versed in **DevOps practices, Agile methodologies, Git-based workflows, and root cause analysis (RCA)** to ensure reliable operations and fast production issue resolution.

Work Experience

DevOps Engineer | Febi.ai, Gurgaon | May'23 - Present

Responsibilities:

- Conceived & maintained resilient **AWS ecosystems** leveraging EC2, ECS, EKS, RDS, DocumentDB & S3 to support mission-critical business applications while sustaining **99.9% service availability**.
- Delivered **25% reduction in cloud expenditure** through **compute rightsizing, Reserved Instance utilization & adaptive scaling strategies**, resulting in annual savings of nearly **\$15K**.
- Oversaw **Kubernetes-based application landscapes** consisting of **20+ microservices**, integrating **NGINX Ingress Controller, HPA, and namespace-level governance controls** to maximize cluster efficiency.
- Reengineered legacy deployment workflows through **Docker multi-stage containerization**, lowering artifact footprint by **40%** and accelerating release execution by **threefold**.
- Devised **observability solutions** using **Prometheus, Grafana, and Fluent Bit** to enable centralized telemetry, capacity tracking, and faster root-cause identification.
- Automated **software delivery lifecycles** with **Jenkins-driven pipelines** and webhook-triggered integrations, enabling seamless validation and release promotion across environments.
- Minimized **deployment turnaround time** from **2 hours to 45 minutes** by introducing concurrent execution models and rollback recovery procedures.
- Simplified operational support through **Python & Shell-based automation utilities** for provisioning, troubleshooting, and incident-response workflows, reducing manual dependency by **70%**.
- Transitioned infrastructure administration from manual setups to **Terraform-based declarative provisioning**, enabling consistency, scalability, and audit-ready change tracking.
- Engineered reusable **Terraform modules** for **networking, databases, Kubernetes services, and access management**, compressing setup efforts from days into hours.
- Instituted automated **patch governance** with **AWS Systems Manager (SSM)**, ensuring adherence to enterprise compliance and vulnerability management standards.
- Hardened cloud and Kubernetes security through **IAM least-privilege policies, MFA enforcement, and RBAC authorization frameworks**.
- Enabled continuous **security monitoring and audit readiness** through **AWS GuardDuty, Inspector, and CloudTrail** integrations, lowering incident exposure by **40%**.
- Directed **certificate lifecycle management** using **AWS Certificate Manager (ACM) & Route 53 validation workflows** to maintain secure encrypted communications across enterprise services.

Projects

Microservices E-Commerce Platform on AWS EKS | Tech Stack: AWS EKS, VPC, ALB, Docker, Kubernetes, MongoDB, Redis, MySQL, RabbitMQ, Prometheus, Grafana

- Deployed a cloud-native **microservices-based e-commerce platform** on **AWS EKS** using a scalable three-tier architecture with **NGINX Ingress Controller** and **Application Load Balancer (ALB)** for high availability and traffic management.
- Managed and orchestrated **8+ containerized microservices** with **Kubernetes StatefulSets, persistent volumes, and HPA**, integrating MongoDB, Redis, MySQL, and RabbitMQ for reliable distributed application performance.

Enterprise Disaster Recovery & Business Continuity Solution | Tech Stack: AWS EC2, ECS, VPC, S3, RDS, Auto Scaling, CloudWatch, Lambda, SNS, Multi-AZ

- Designed and implemented an enterprise-grade **disaster recovery solution** for ECS-hosted applications, achieving **RPO of 15 minutes** and **RTO of 1 hour** through multi-AZ deployment architecture across 3 Availability Zones.
- Automated backup and recovery workflows using **S3 versioning, lifecycle policies, cross-region replication, and RDS Point-in-Time Recovery (PITR)** to strengthen business continuity and data resilience.
